BIMcollab

BIM issue management software
Click, share, and start collaborating for better buildings

Bridge the gap between BIM tools and let your team work better. Together.

NEVER LET ANY ISSUE SLIP AWAY
Say farewell to spreadsheets, sticky notes and emailing numerous separate (BCF) files to manage your issues. BIMcollab centralizes all the issues of your project and offers a clear overview, intuitive functionality and insightful reporting features.

SIMPLIFY COMMUNICATION
Share issues with team members whether they are working with the same or different BIM tools. Set deadlines to issues, assign them to team members, who directly get an email notification. Or choose to receive a daily or weekly activity overview.

GET INFORMATION WHERE IT'S NEEDED THE MOST
Create, filter and lookup issues within your BIM model. Synchronize them directly to BIMcollab and speed up the process and improve the reliability of your issue management.

BIMcollab

Streamlines work and improves team productivity

Here's how we'll help your team collaborate better, enhance model quality, and save time. All with one platform.

GET BIM ISSUES IN FRONT OF THE RIGHT PEOPLE

Inform each team member with up-to-date and relevant BIM issues directly within their BIM model checker and BIM authoring tools. Adding relevant information and context to the issue is just as simple. And get all your project issues resolved quickly.

STORE, MANAGE AND RESOLVE ISSUES WITH LESS EFFORT

Bring all the issues of your project together in just one clear overview. Have access to this data anywhere and anytime from any device like mobiles and tablets.

CONNECT YOUR BIM TOOLS TOGETHER AND WORK BETTER AND FASTER

Bridge the gap between BIM model checkers and BIM authoring tools to automatically share issues and organize interactions between team members. Use this process to improve the reliability of your issues management.

REDUCE BIM MEETINGS FROM HOURS TO MINUTES

Avoid overlaps of issues and allocate them more efficiently. Simply provide every member of the meeting a clear overview of all relevant issues to discuss.

TRACK ISSUES AND REPORT YOUR PROGRESS

Add markups to snapshots, notify team members or set the desired approval workflow. BIMcollab creates a full audit trail about communication- and issue history, usable in legal disputes. Several metrics and graphs provide information about project progress and team workload.

CREATE AN EFFICIENT AND SECURE BIM WORKFLOW

Eliminate the need of spreadsheets or BCF. zip files to manage issues. Informing BIM modelers of new issues is done automatically and it just takes one click to resolve and report the resolution back to the team.
